

don't drive reset\_gpios high  
 mcp130t is open drain with 5k internal pull-up  
 do we really want 3.3k pull-up here? unclear  
 don't use reset\_n at all!

v\_charge can be 4.2 volts  
 v\_batp must be 1.4 - 3.6 volts  
 i\_batp on the order of 20uA  
 56k should drop 1.22v volts, and consume 27 microamps

mounting holes for 4-40 screws

GND hole for use with things like magnetic power switch.

Tolerate up to 5V charging

SMA is optional default is wire whip
